Formula #	Sum	Closed Form	Comments
1	$\sum_{k=0}^n ar^k \ (r \neq 0)$	$\frac{ar^{n+1} - a}{r - 1}, \ r \neq 1$	If $r = 1$, formula (3) applies.
2	$\sum_{k=i}^n ar^k \ (r \neq 0)$	$\frac{ar^{n+1} - ar^i}{r - 1}, \ r \neq 1$	This sum is the same as $\sum_{k=0}^n ar^k - \sum_{k=0}^{i-1} ar^k$
3	$\sum_{k=i}^n c$	$c \cdot (n - i + 1)$	Setting $i = 0$ gives $\sum_{k=0}^n c = c \cdot (n + 1)$

Counting

Symbols: λ

Equations:

- Sum Rule:

if S is the union of m disjoint sets S_1, S_2, \dots, S_m , then the number of elements in S is:

$$|S| = |S_1| + |S_2| + \dots + |S_m|$$

- Product Rule:

for a sequence of m choices the total number of elements is:

$$P(m) = |P_1| \cdot |P_2| \cdot \dots \cdot |P_m|$$

- Subset Exclusion:

if $C = A - B$ is the difference of two sets, where $B \subseteq A$, then the number of elements in C is:

$$|C| = |A| - |B|$$

- Inclusion/Exclusion:

when a set D to be counted is the union of non-disjoint sets A and B , the number of elements in D is:

$$|D| = |A| + |B| - |A \cap B|$$

Permutations and Combinations:

- r -permutations: $P(n, r) = \frac{n!}{(n-r)!}$

- r -permutations with repetition allowed: n^r

- The number of different permutations of n objects, where there are n_1 indistinguishable objects of type 1, and n_2 indistinguishable objects of type 2, ... and n_k indistinguishable objects of type k is $\frac{n!}{n_1!n_2!\dots n_k!}$

- r -combinations $C(n, r) = \frac{n!}{r!(n-r)!}$

- r -combinations with repetition allowed:

$$C(n+r-1, r) = \frac{(n+r-1)!}{r!(n+r-1-r)!} = \frac{(n+r-1)!}{r!(n-1)!}$$
