A conditional statement $p \rightarrow q$ can also be read as:

- If p then q
- p implies q
- If p , q
- p only if q
- q if p
- q unless $\sim p$
- q when p
- q whenever p
- q follows from p
- p is a sufficient condition for q (p is sufficient for q)
- q is a necessary condition for p (q is necessary for p)

Proofs:

- Direct: Assume P and prove Q .
- Contrapositive: Assume Not Q and prove Not P .
- Contradiction: Assume P and Not Q and prove a contradiction.
- Induction: Prove base(s), assume $P(m)$, prove $P(m+1)$.
