- Contradiction: Assume P and Not Q and prove a contradiction.

  $$P(m) = |P_1| \cdot |P_2| \cdot \cdots \cdot |P_m|$$

- Subset Exclusion:

  if $C = A - B$ is the difference of two sets, where $B \subseteq A$, then the number of elements in C is:

  $$|C| = |A| - |B|$$

- Inclusion/Exclusion:

  when a set D to be counted is the union of non-disjoint sets A and B, the number of elements in D is:

  $$|D| = |A| + |B| - |A \cap B|$$
